Good morning

Attached are the separate applications for the invasive weed and decaying muck on Twin lakes. These are the 6 current customers that would like the work done. We be off loading at each of the applicants waterfront then removing the material to an off site location. The material will loaded into a dump trailer with a mini excavator then transported. We will install silt fencing at the waters edge of each of the locations for run off mitigation. I have also attached a few photos of the waterfront locations and the invasive weeds and decaying muck that we will be removing. We will be removing the material all the way along the waterfront at each of the homes. Please let me know if you have any questions. We will avoid any weeds that the commision wishes for us to leave un touched.

Thank you in advance

Jeff
